

## iLock™ Universal Access Control System: It's easy, convenient and affordable security

The LochIsle iLock access control system uses the power of the Internet to allow small business owners to control and monitor access to their homes and businesses.

### Easy

- No software to install - works from a browser
- Simple tree-structure user interface
- Door owners only need user's email address to assign, manage and track access – no keys, PINs or cards to track
- Users keep track of their own access credentials

### Convenient

- Door owners assign or delete access permission - in seconds – from anywhere
- Door owners and users don't have to meet to exchange keys or cards
- Users use the same "key" for all the iLocks in their life
  - Check the access logs from anywhere, at any time
  - Manage unlimited remote sites with one log-in
  - Up to 4000 users per door

### Affordable

- Installation costs less than other access control systems
- Low monthly service fee
- "keys" are low cost (less than \$5)
- Never re-key another lock
- Scalable architecture

### Secure

- Lost "keys" present little threat – user can cancel them in an instant from anywhere
- Users can change keys anytime
- No two "keys" are the same, and they can't be copied
- audit trail accessible from anywhere over the Web
- Schedule when access is allowed
- Get alerts and notices by email, SMS, phone, etc.
- Sophisticated encryption throughout
- Class A Data centers protected to industry standards (PCI-DSS)
- Multi-factor credentials capability
- Vandal resistant, weatherproof
